Needs

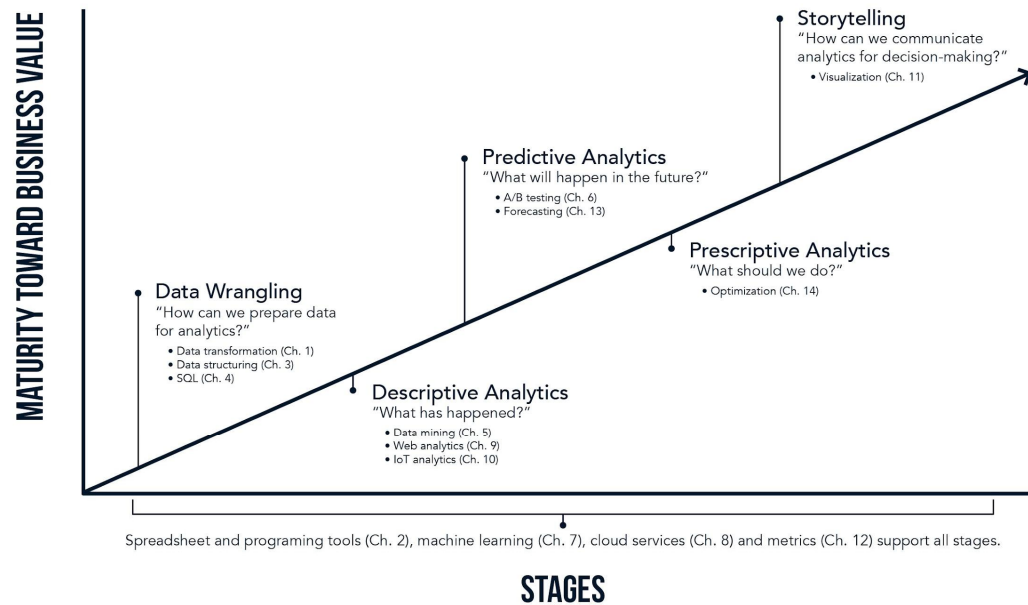

Problem and Solution

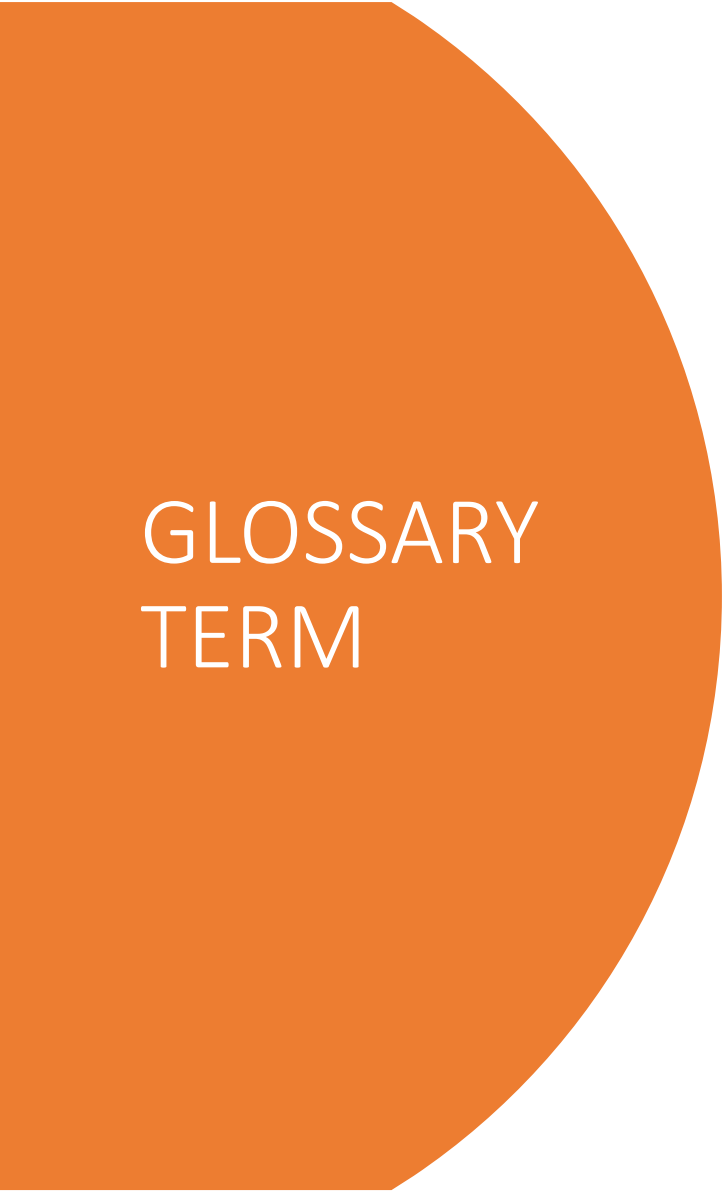

- **Problem:** Too much happening too quickly in business analytics
- **Solution:** This class will help you focus on the essentials

Five Stages of Business Analytics

FIVE STAGES OF BUSINESS ANALYTICS

A large orange shape on the left side of the slide, consisting of a rectangle on the left and a quarter-circle on the right.

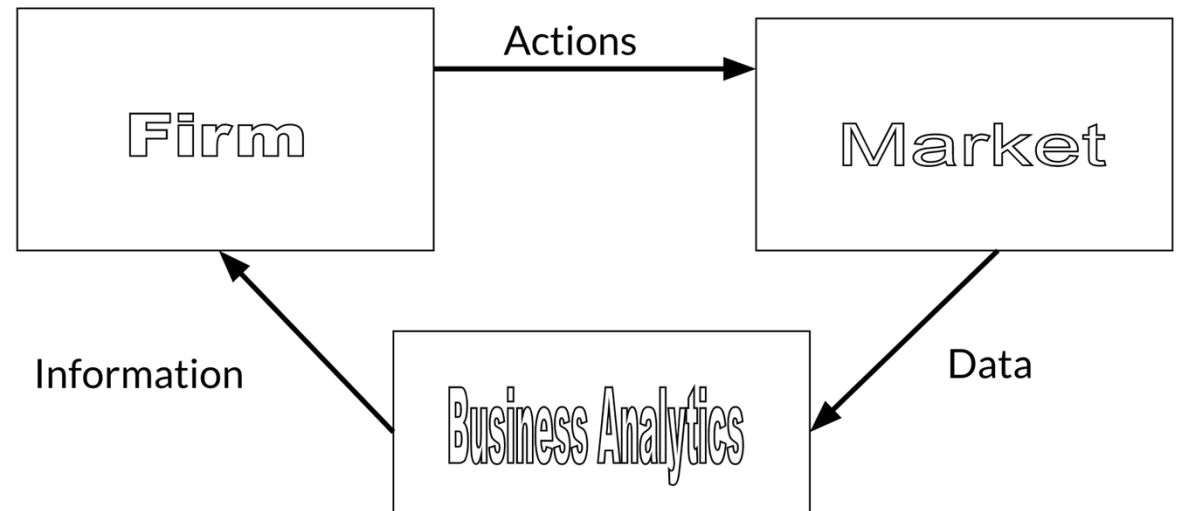

GLOSSARY TERM

business analytics: the use of a variety of skills, technologies, and techniques to investigate previous business performance, understand the current state of the business through the insight provided by exploration and diagnostics, and use the information to drive future business plans

A yellow dashed line in the bottom right corner, composed of four curved segments.

Business Analytics is the Link Between the Firm and the Market

If information is not valuable, then don't analyze it!!

Three Steps of Getting Data Ready for Analysis

Step 1: CLEAN

Step 2: STRUCTURE

Step 3: INTEGRATE

Why Clean Data?

- Data in the real world are dirty
 - **incomplete**: lacking attribute values, lacking certain attributes of interest, or containing only aggregate data
 - **noisy**: containing errors or outliers
 - **inconsistent**: containing discrepancies in codes or names
- No quality data, no quality results!
 - Quality decisions must be based on quality data
 - Data warehouse needs consistent integration of quality data

Why Structure Data?

- Because it comes to us in ways that would otherwise be difficult to analyze
- Unstructured data does not reside in traditional databases and data warehouses
- Unstructured data may have an internal structure, but does not fit a relational data model
- Unstructured data can be generated by both humans and machines
 - Textual and multimedia content
 - Machine-to-machine communication

Why Integrate Data?

- Two or more database sources may offer more insights together than separate.

Why Visualize Data?
